AI-Powered Training: Turn Your Content into Courses

Stop building courses by hand. Upload what you already have and let AI do the first draft.

A TriLMS eBook

The content bottleneck

The reason training lags the business is production time. Scoping, designing and building one course by hand takes weeks. Meanwhile the policy, the product and the process have already changed. AI collapses that timeline — from weeks to minutes — by turning material you already own into a structured course you review and publish.

From material to course in three steps

1. Upload your source. A PowerPoint, a PDF, a Word document — or a recorded video or audio session.
2. Let AI design it. The AI proposes how to present the material (read / listen / watch), a module sequence, and the right exam difficulty (easy / medium / hard) with a rationale.
3. Generate, review, publish. AI drafts the lessons and a final exam; you edit and publish. What took weeks now takes an afternoon.

Where AI keeps helping after launch

- A learner AI tutor answers questions grounded in your own courses, with citations.
- Live and offline captions plus translation across 40+ languages.
- At-risk insights flag disengaged learners before they drop off.
- An instructor copilot drafts quizzes, messages and interventions.

Quick checklist

- Gather existing material (docs, slides, video, audio)
- Upload it to the AI builder
- Review the AI's presentation plan and exam level
- Generate lessons + exam, then edit
- Publish and assign
- Let the AI tutor support learners

Try it in TriLMS

TriLMS turns a document or a recording into a full course with lessons and an exam — and recommends how to teach it. Try the AI builder at trilms.com.
